multirail

**A highly adaptable
solution for overhead
material handling.**

Multirail provides improved operational efficiency and quickly provides return on investment through saving time with production efficiency, reducing product damage and production errors.

Popular applications for Multirail are; spray booths, powder coating ovens, abattoirs, material handling and production lines the possibilities are endless.

Your project needs

Our experienced team are on hand to guide you through the range of components and suggest the best setup to suit your requirements.

Onsite visit and survey

We can visit your site and help with planning the most effective Multirail setup for your space.

Design and layout

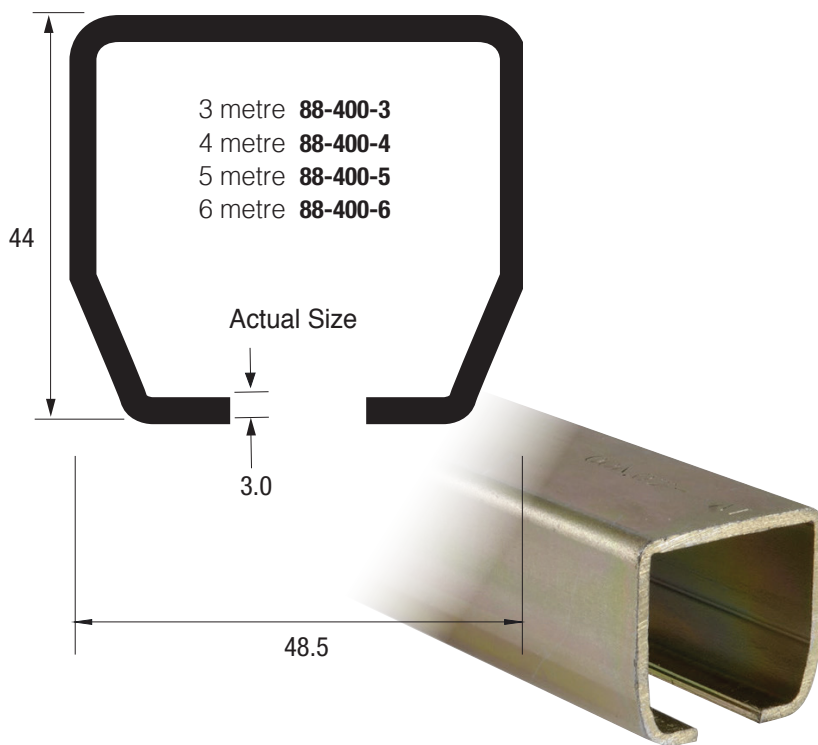

We can provide a technical drawing based on your exact dimensioned track layout, showing all junction points. This will also be used to provide an accurate price and project plan.

Fitting recommendations

We can also work with you to advise on fitting and installation, especially if this is being outsourced.

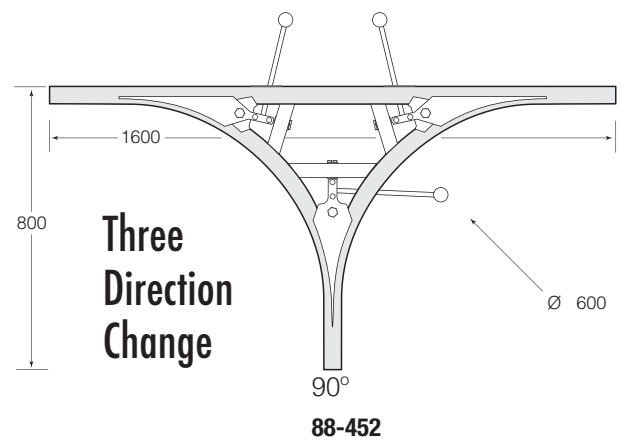

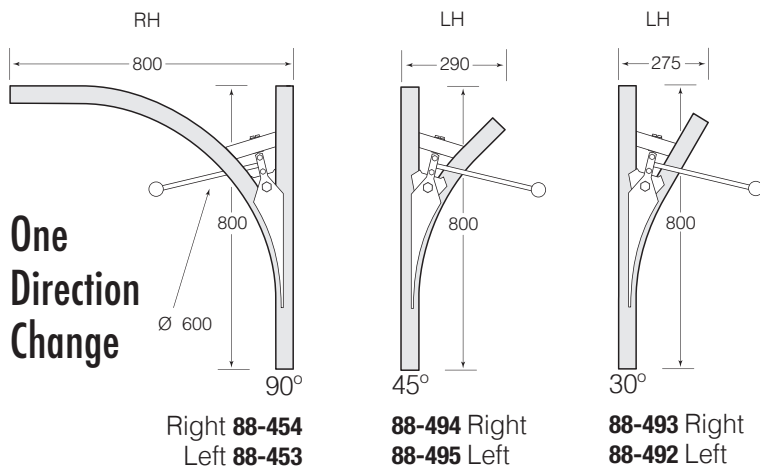

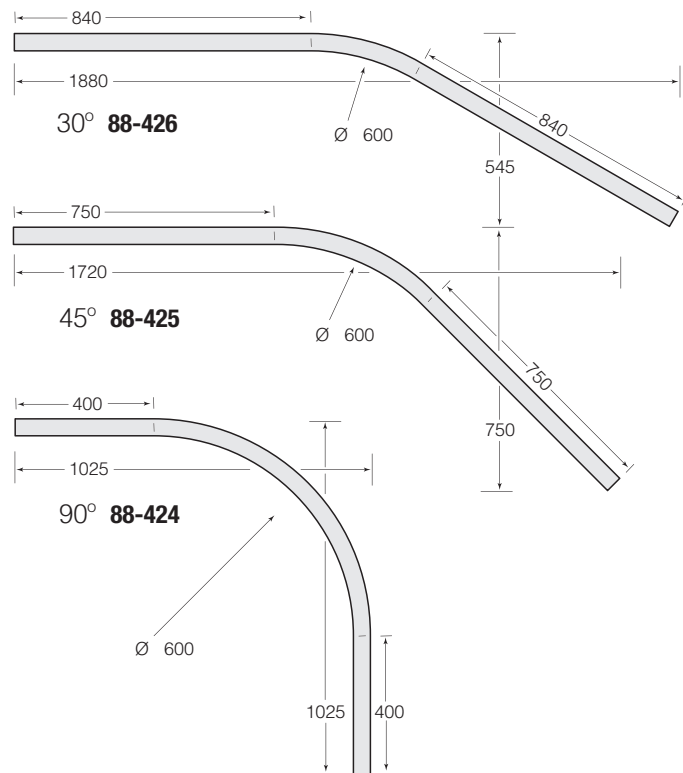

Steel Top Track

Tubular Steel Track
Max capacity 400kg mitres

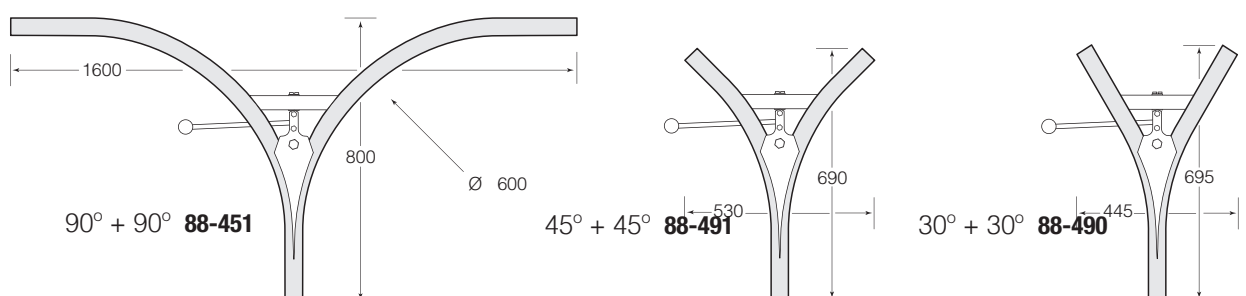

Steel Track Bends

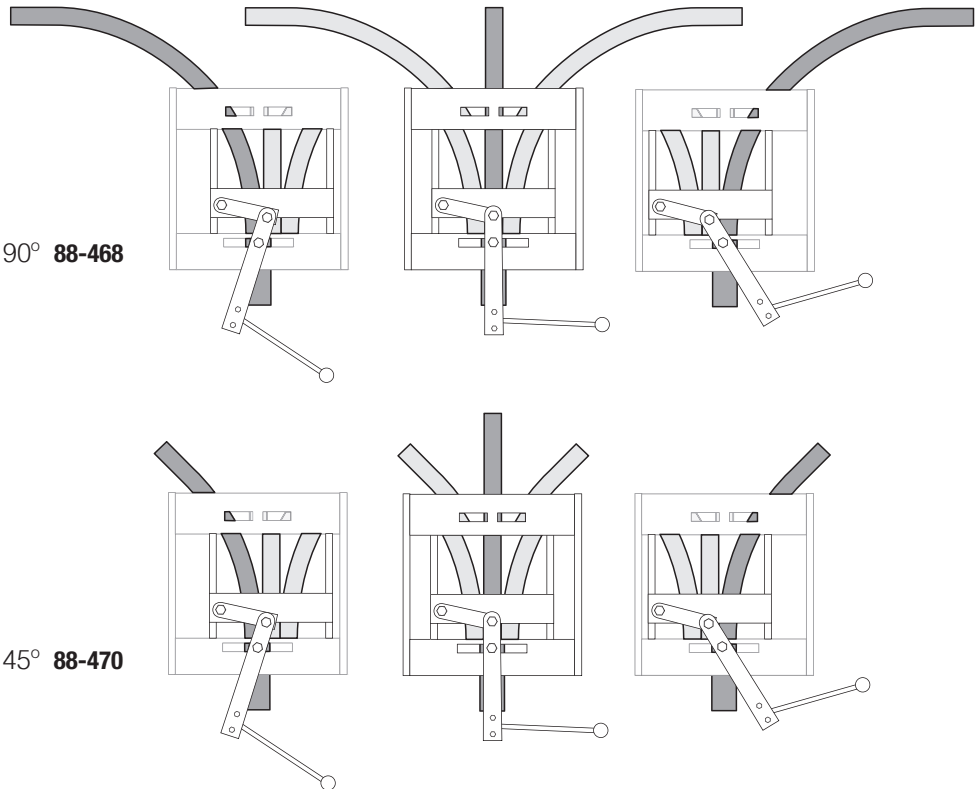

Total linear length 2 metres

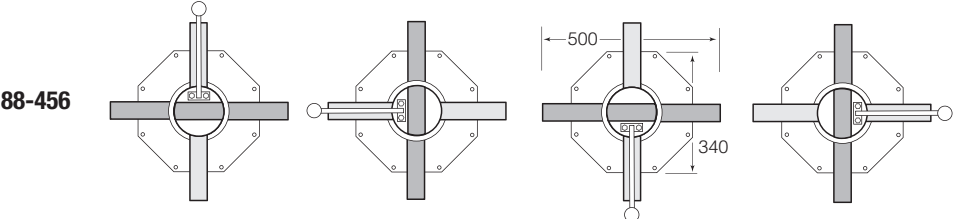

Two Direction Change

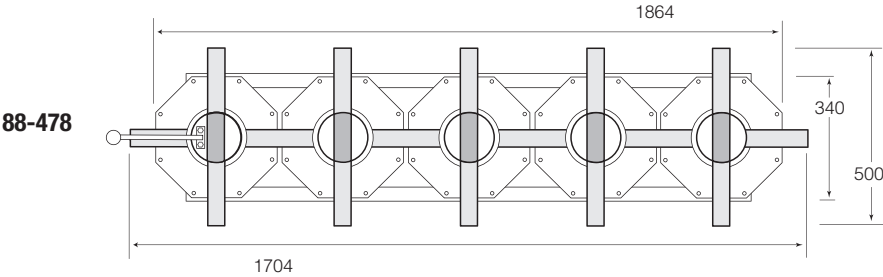

Three Direction Sliding Change

Turntable

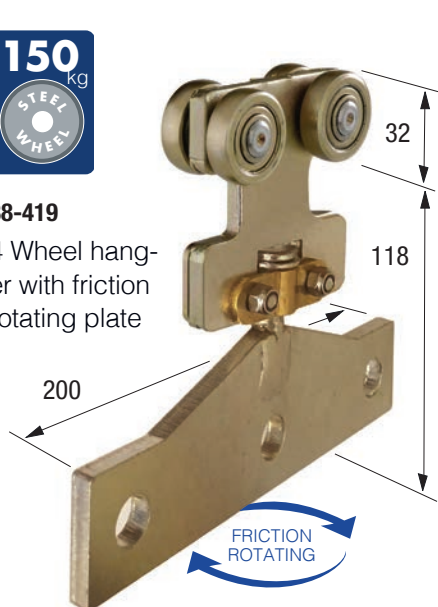

5 x Turntable set

88-419

4 Wheel hanger with friction rotating plate

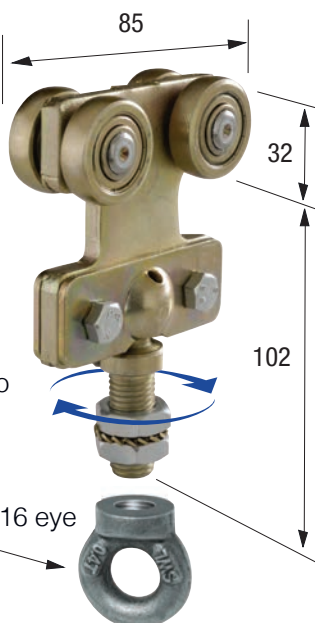

88-417

4 Wheel rotating hanger - indexed version also available

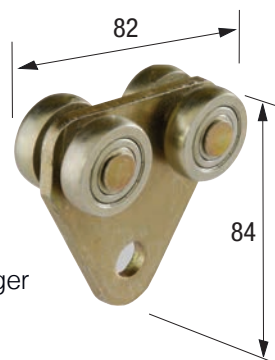

101046

Optional M16 eye nut

88-423

4 Wheel fixed hanger

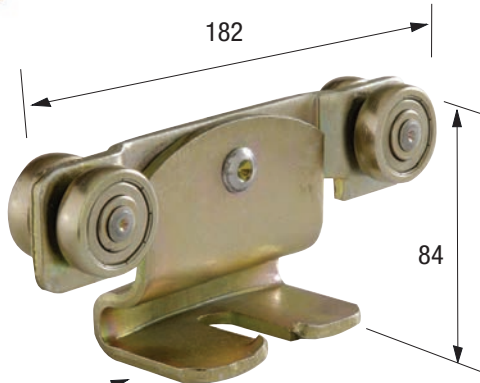

88-411

2 Wheel fixed hanger

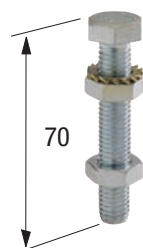

88-410

4 Wheel hanger

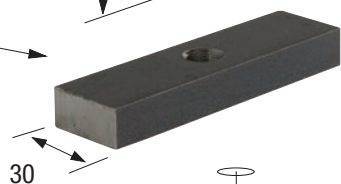

88-415

Hanger screw

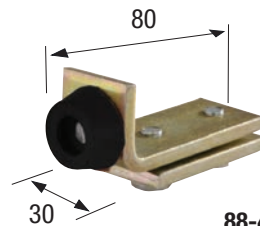

88-416

Threaded welding fitting

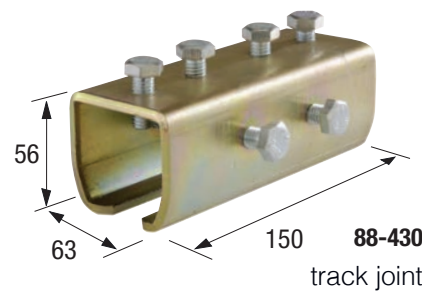

88-442

4 Wheel rotating hanger with hook

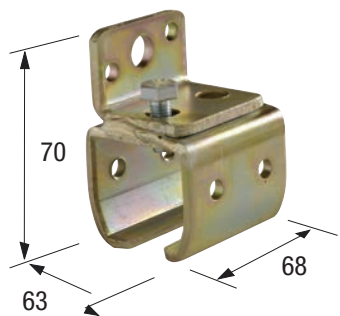

88-460

Track stop

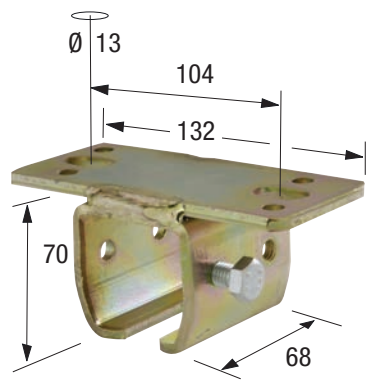

88-430

track joint

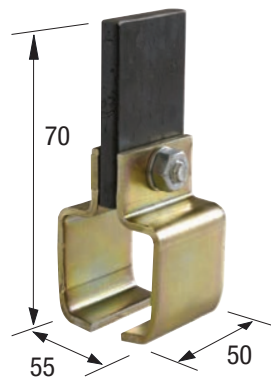

88-450

Wall support bracket

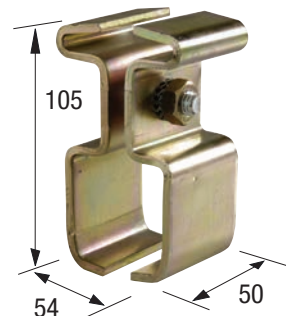

88-440

Ceiling support bracket

88-413

Split suspension welding bracket

88-412

Split suspension bracket

multirail

An extremely flexible system designed for efficient overhead material handling.

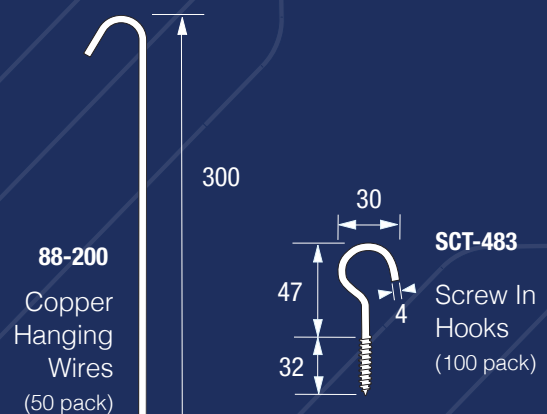

Multirail systems offer a wide range of hangers, support brackets and track options allowing them to be used for almost any application and layout.

Multirail layouts often have different designated areas, for example material handling or assembly, spray booths, drying areas, storage or dispatch, these areas are incorporated into the layout plan depending on the project requirement.

We can offer bespoke manufacture of components to suit your application, also high temperature bearings are available to ensure longevity in an oven environment.

Multirail is a virtually maintenance free, time saving solution that is used across many industries, including spray booths in joinery and automotive workshops, meat processing in abattoirs and country estates, material handling in manufacturing environments and production lines, plus many other examples.

If you have any technical questions feel free to call us on **01280 822288**
